

The 7th International Palaeontological Congress

Cenozoic vertebrates of Africa

This symposium will focus on the fascinating world of African vertebrates of the Cenozoic, spanning the Paleogene to the Quaternary. The Cenozoic is a pivotal period that has shaped the evolution and diversification of vertebrate fauna and their environments over the past 66 million years. This comprehensive symposium will examine any taxon during this time, providing insights into taxonomy, biodiversity, palaeobiology, palaeobiogeography, and palaeoecology. Don't miss this opportunity to explore the dynamic history of life on the African continent.

Conveners:

- Alberto Valenciano (albvalen@ucm.es)
- Adam Hartstone-Rose (adamhrose@ncsu.edu)

If you are interested in this symposium, please contact the conveners.
